

CARE COORDINATION

For patients dealing with chronic and complex health issues, navigating and understanding the ins-and-outs of health care can be challenging.

The Care Coordination Team at Aspirus can make a huge difference in the quality of life for these patients. Our Care Coordination Team will advocate for and support patients to help them improve their overall health.

Our Care Coordination Team will:

- Assist in coordinating patient care between primary and specialty health care providers.
- Assist in coordinating patient care in the hospital, at the clinic, and at home.
- Facilitate access to services and programs available within Aspirus and in the patient's community.
- Work with patients and their health care teams to develop individualized plans of care that include goals to help the patients improve their quality of life.
- Help patients understand their health issues and treatment options so that the patient and their family can make the best choice for their situation.
- Partner with the patient and their health care team to help identify goals and support the patient while they meet those personal goals.

For more information about Care Coordination and the various services available at Aspirus, please contact the Aspirus Information Center at 715.847.2380 or toll-free at 800.847.4707.
